

PICTURES OF CLASSIC MUSTANGS WITH A TCI FRONT SUSPENSION AND DIFFERENT SPINDLE OPTIONS  
(2 INCH DROP SPINDLES VS. STANDARD HEIGHT SPINDLES)

**The pictures below show Mustangs with the 2 Inch Dropped Spindles.** The 2 Inch dropped spindles yield approximately 2 - 2.5 inch drop in front from Stock Height. Ride height varies based on over wheel/tire height and how much the lower coil-over collar is adjusted for spring pre-load.

The pictures below show Mustangs with the Standard Height Spindles. The standard height spindles yield a subtle drop in the front of approximately 1/2 - 1 inch drop from Stock Height. Ride height varies based on over wheel/tire height and how much the lower coil-over collar is adjusted for spring pre-load.
